wirespeed consultants

At Wirespeed, we aim to give our clients the best strategic advantage possible through the structured use of IT.

An overview

Most organisations place information technology policies at the very centre of their operations. It governs system-wide databases, computerised finance packages, client management software and the networks that bring the information to the user.

The greatest impact on an organisation's future is its ability to effectively harness technology. Strategic IT infrastructure planning which offers greater employee effectiveness and customer services are critical to remaining current within any industry.

Evolving these infrastructures requires practical experience of implementing, supporting and managing technology for the small, medium and corporate workplace. It also requires an understanding of how IT directly benefits organisations; especially in lean economic times

Deployment Services

If you're looking to deploy new machines in a complex environment, Wirespeed's suite of installation services can deliver the solution to fulfil your deployment needs.

The full-featured deployment process offers the delivery of customised, managed solutions that handle all aspects of planning, project management, order fulfilment, disposition of legacy assets and logistics through software and hardware installation.

IT Service Centre

Wirespeed offers a proactive, flexible service centre that enables customers to have a trouble-free experience not only with hardware equipment and applications but also personal training and professional resource recruitment - ensuring that your organisation stays up and running.

a team, dedicated to the project. The team will execute the project from beginning to end. This team will identify your needs, design, implement, test and finally evaluate the systems infrastructure whose architecture will meet the demand. Once complete, the team will hand over to an experienced support unit who will be responsible for the continued life-cycle support.

This process maps directly onto the typical lifecycle approach applied to systems design. Wirespeed has developed a complement to the design sector, whereby the stage is further partitioned using a proprietary Three-step methodology. This offers the customer the flexibility of vendor interoperability and "late project changes".

Interoperability - Designed to improve the connection between the many diverse applications and technological platforms that exist in the current technological climate.

when each IT investment requires careful planning and flawless execution.

At Wirespeed, we aim to give our clients the best operational advantage possible through the structured use of IT. Our services span throughout the entire IT infrastructure. We help our customers with the choice of technology, its procurement and tailored configuration and its testing, integration and management within the enterprise.

What we deliver

In answer to the demand for services that span desktop, server, networking, procurement and consultancy, we have developed an entire integrated portfolio of infrastructure services; targeting the Small, Medium and Corporate enterprise.

Small Business Solutions

While all small businesses are different, Wirespeed's Small Business solutions can help create a faster and more efficient business environment. Wirespeed's Small business service Portfolio is designed to help businesses, with up to 75 computers, punch above their weight.

A flexible, but integrated product suite, allows small organisations to enjoy functionality and benefits previously only available to large corporate enterprises.

“ We are hands-on people, and always driven by your needs ”

Consultancy

Wirespeed Consultants offer trusted advice to help organisations make informed decisions across the full lifecycle of information services delivery. We draw on specialist expertise acquired through our work with customers across many industry sectors.

Network Infrastructure

Wirespeed Infrastructure Services encapsulate a comprehensive suite of multi-vendor networking solutions delivering the highest levels of availability, quality of service and security for your specific network needs. The suite focuses on network architecture, structured cabling and component upgrades.

How we deliver

At Wirespeed, we have a passionate desire to achieve the right result for our clients. We offer approachable and co-operative teams dedicated to our clients needs.

Wirespeed provides services to your specification. All pre-sales support is inherently free of charge. Once a solution for your organisation is identified, you will be assigned

Late Project Changes - Dynamic; developed to cope with last minute changes. Three-step combats the relative cost of changes within a project, expanding the minimal cost phase up to the point of implementation.

Who we have delivered to

Our customers know we add our greatest value through long-term relationships. That's why ninety percent of our oldest customers still remain significant customers today. Our portfolio of clients features:

Financial Services

Including financial institutions and insurance organisations, investment advisors and professional services organisations

Educational Establishments

Including public, private, further & higher education

Commercial

Including retail, energy, entertainment, automobile, manufacturing and computing organisations

Technology & Communications
